The Linux Foundation

Marta Piekarska

Directory of Ecosystem, Hyperledger, *The Linux Foundation*

PhD in User Informed Design of Privacy Tools

10 years of experience in technology companies, including Apple, Yahoo & Deutsche Telekom

4 years in Blockchain: Blockstream & Hyperledger

The Linux Foundation
is Much More
than Linux

Security

We are helping global privacy and security through a program to encrypt the entire internet.

Networking

We are creating ecosystems around networking to improve agility in the evolving software-defined datacenter.

Cloud

We are creating a portability layer for the cloud, driving de facto standards and developing the orchestration layer for all clouds.

Automotive

We are creating the platform for infotainment in the auto industry that can be expanded into instrument clusters and telematics systems.

Web

We are providing the application development framework for next generation web, mobile, serverless, and IoT applications.

Blockchain

We are creating a permanent, secure distributed ledger that makes it easier to create cost-efficient, decentralized business networks.

Introducing

HYPERLEDGER

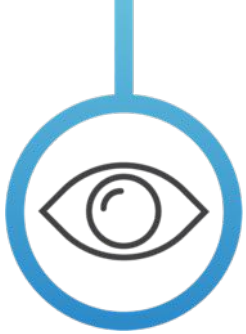
BLOCKCHAIN TECHNOLOGIES FOR BUSINESS

Open source collaborative effort to advance cross-industry **blockchain technologies**

Hosted by **The Linux Foundation**, fastest-growing project in LF history

Global collaboration spanning finance, banking, IoT, supply chains, manufacturing and technology

The Hyperledger
Vision



Blockchain promises to change the way business is conducted and transactions are executed across industries. Precisely how, and the pace at which, each of these industries adopts blockchain will surely vary.

There will never be one global chain-of-all chains that all industries convert to.

Similar to The Linux Foundation, Hyperledger also has a modular approach to hosting projects. Think of Hyperledger as a **greenhouse** growing and sustaining business blockchain projects from seed to fruition. The Linux Foundation and Hyperledger provide the infrastructure for open development to occur among a diverse and thriving community.

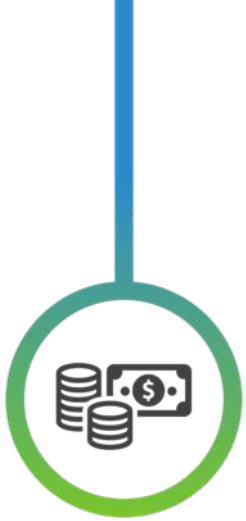
HYPERLEDGER COMPOSER
Model and build blockchain networks
HYPERLEDGER EXPLORER
View and explore data on the blockchain
HYPERLEDGER QUILT
Ledger interoperability

Myth Debunked:
Blockchain ≠
Cryptocurrency



Cryptocurrency is an **application that sits on top of blockchain**.
Not the other way around.

Hyperledger
Goals

Create enterprise grade software
open source, distributed ledger frameworks & code bases to support business transactions

Provide community-driven infrastructures
that are open, neutral and supported by technical and business governance

Build technical communities
to develop blockchain and shared ledger POCs, use cases, field trials and deployments

Educate the public
about the market opportunity for blockchain technology

Promote our communities
taking a toolkit approach with many platforms and frameworks

Deployments & Use Cases

Hyperledger embraces the full spectrum of industry use cases, especially enterprise scenarios with widely varied requirements for decentralization, trust, continuity and confirmation times. Each represents a potentially unique optimization point for the technology.

Interstate
Medical Licensing

Interstate Medical Licensing

The Challenge

Interstate medical licensing is complex, and the provider directories and claims adjudication processes need increased trust and transparency.

The Collaboration

Hyperledger members Hashed Health and the State of Illinois have implemented a pilot program to identify opportunities to improve the efficiency and accuracy of these processes in Illinois.

The Technology

A blockchain-based registry, built using Hyperledger Fabric, streamlines the sharing of smart contracts and medical credential data to automate workflow associated with interstate and multistate licensure.

HYPERLEDGER

Seafood Supply
Chain Traceability

Seafood Supply Chain Traceability

The Challenge

Blockchain technologies are being used in the fishing industry to drive fish catch towards more ethical practices.

The Collaboration

Hyperledger member Intel is collaborating with the broader community to implement a modern approach to seafood traceability.

The Technology

Leveraging Hyperledger Sawtooth, IoT sensors attached to any object (like fish) can trace ownership, possession, and telemetry parameters to record the seafood journey from ocean to table.

Diamond
Supply Chain

Diamond Supply Chain

The Challenge

The Kimberley Process Certification Scheme established in 2003 to prevent conflict diamonds is a long, paperwork-heavy process with a history of fraud from missing documents.

The Collaboration

Hyperledger members SAP Ariba and IBM are collaborating with Everledger on a pilot to prevent blood diamonds from entering the supply chain.

The Technology

The distributed ledger diamond track and trace system using Hyperledger Fabric v1.0 allows everyone in the industry to write to it, from miners, distributors and retailers, using the light pattern that is unique to every diamond to create an ID.

everledger IBM SAP

Digital
Identity

Digital Identity

The Challenge
As of 2017, only 44% of Filipinos were utilizing bank accounts, hampered by inefficient "Know Your Customer" laws.

The Collaboration
The Bankers Association of Philippines (BAP), in partnership with Hyperledger member Amihan and a coalition of major banks, undertook a POC to test a nation-wide self-sovereign ID system.

The Technology
The POC used Hyperledger Indy to develop a platform that streamlines new account onboarding, allowing consumers to enter information once in a digital and privacy-preserving way.

HYPERLEDGER INDY

AMIHAN

Green Assets Management

Green Assets Management

The Challenge

Generating carbon assets more efficiently, helping to build a green, low-carbon and environmentally-friendly future in China.

The Collaboration

General Hyperledger member Energy Blockchain Labs partnered with Premier member IBM on the world's first blockchain-based green assets management platform, based on Hyperledger Fabric.

The Technology

Blockchain technology, like the use of Hyperledger Fabric here, is expected to become an important means for effective control of carbon emissions in China, the world's largest source of carbon emissions. Carbon asset development, is one of the most popular ways of encouraging enterprises to decrease emissions and use low carbon emission technology.

ENERGY BLOCKCHAIN LABS

IBM

Real Estate
Transactions

Real Estate Transactions

The Challenge

In some cases of corruption, the move to government-owned centralized databases backfired, and digital histories of land titles were eradicated, properties seized and handed over to oil companies.

The Collaboration

The winning team at the Consensus 2017: Building Blocks Hackathon, built an online property banking and acquisition game utilizing Hyperledger Fabric with IBM Bluemix.

The Technology

HyperProperty shows that Hyperledger Fabric can be used to guarantee who owns what properties. Decentralizing databases and turning to DLTs track land titles could keep governments accountable and create a more trustworthy system, even in instances where the individual actors may not be trusted.

Letters of
Credit

Letters of Credit

The Challenge

The LOC process is a difficult one to automate due to the sheer number of network participants involved.

The Collaboration

Institutions in Singapore, including Monetary Authority of Singapore, several banks and Standard Chartered, as well as China CITIC Bank and Minsheng bank have come together to use blockchain to create a LOC system. One of the first transactions of this kind in China saw a 100 million letter of credit transaction be completed without a hitch.

The Technology

Asian markets have been deploying and developing various solutions for LOC based on Hyperledger Fabric. Blockchain provides a common ledger for LOC and presents a modernized opportunity; the LOC is stored on the blockchain, and once spent, is marked as such so that the value of the letter cannot be spent again.

Digital Trade
Chain

Digital Trade Chain

The Challenge

Today, banks live in a competitive world. Small and mid-sized businesses generated 85% of employment growth in Europe in recent years, but only ~50% of them have access to formal credit. The Digital Trade Chain exemplifies how blockchain can bring the required trust and transparency to a new business network and associated business model.

The Collaboration

A consortium of major world banks including: Deutsche Bank, HSBC, KBC, Natixis, Rabobank, Société Générale, Santander, UniCredit and Nordea

The Technology

we.trade is a blockchain-based international trading system that enables accurate trading posture information, order to settlement control, risk coverage, track and trace options

we.trade
more trust. more trade.
